

Rubik's Cube Solver Solution Guide

A Step-by-Step Layer-by-Layer Beginner's Guide with 3D Visual Aids

Understanding Face Rotation Notation

Before you start, familiarize yourself with standard Rubik's cube notation. Each letter represents a 90-degree **clockwise** rotation of that face as you look at it. An apostrophe (') indicates a **counter-clockwise** rotation.

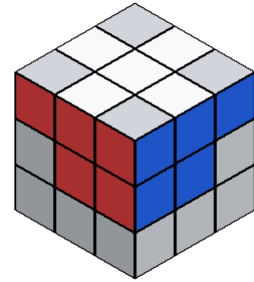

Symbol	Meaning	Visualization & Arrow Action
U / U'	Up (Top Face) / Up Prime	
R / R'	Right Face / Right Prime	
F / F'	Front Face / Front Prime	Rotates the front face facing you. F' is counter-clockwise.
L / L'	Left Face / Left Prime	Rotates the left face (opposite the Right face).

Step 1: The White Cross

Goal: Create a White cross on the top face. Make sure the side facets of the White edge pieces match the color of the adjacent center pieces (e.g. White-Blue edge aligns with the Blue center).

Algorithm / Moves:

Intuitive (No algorithm needed)

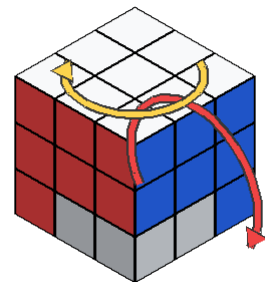

Step 2: Solve White Corners (First Layer)

Goal: Insert the four White corner pieces into their correct spots. Position a corner piece directly below its target spot, then repeat the algorithm **R U R' U'** until it is correctly placed and oriented.

Algorithm / Moves:

R U R' U'

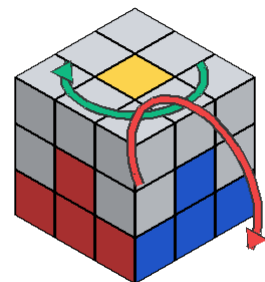

Step 3: Solve Middle Layer (F2L Edges)

Goal: Turn the cube over so Yellow is on Top. Locate a middle layer edge piece on the Top layer (that does not contain Yellow). Match its side color with the center, then perform the matching algorithm to insert it into the Left or Right slot.

Algorithm / Moves:

U R U' R' U' F' U F / U' L' U L U F U' F'

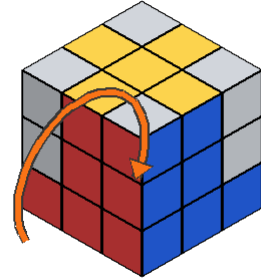

Step 4: Orient Edges (Yellow Cross)

Goal: Create a Yellow cross on the Top face. Depending on the state (Dot, L-shape, or Bar), orient the cube as illustrated and perform the algorithm **F R U R' U' F'** to progress to the cross.

Algorithm / Moves:

F R U R' U' F'

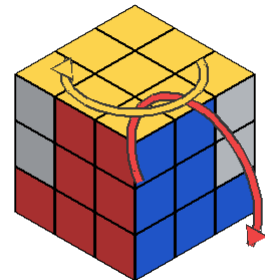

Step 5: Orient Corners (Yellow Top Face)

Goal: Orient all Yellow corners to make the entire Top face Yellow. If you have exactly one Yellow corner facing up (Sune state), put it in the bottom-left of the Top face and perform the algorithm.

Algorithm / Moves:

R U R' U R U² R'

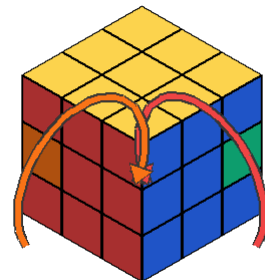

Step 6: Permute Corners (Headlights)

Goal: Position the corners correctly. Look for two corners on the same side that have matching side colors ('headlights'). Put them in the Back, and run the algorithm. If no headlights exist, run it once to get them.

Algorithm / Moves:

R B' R F F R' B R F F R R

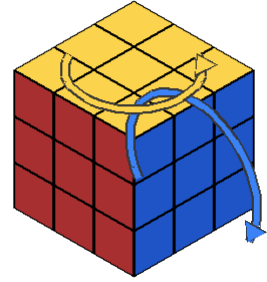

Step 7: Permute Edges (Complete Solve)

Goal: Position the final four edge pieces to complete the Rubik's Cube. If one side is fully solved, put it in the Back and run the algorithm. Repeat until all edges are in their correct slots!

Algorithm / Moves:

R U' R U R U R U' R' U' R2

*Tip: If you get stuck at any step, use the **Auto Mode** solver on the application page to generate the exact sequence of moves from your current scrambled state.*
